

# 3D Design

The school of Visual Arts at Runshaw College is an exciting, dynamic and challenging environment in which to study, where students have access to high quality specialist resources, equipment and technical support.

We are confident that our working environment is second to none, with a great atmosphere generated by our AS and A2 students. The environment is such that amazing pathways for progression emerge for our students. In the years previous, we have seen students moving on to Cambridge to study Architecture – an opportunity created through showing her Runshaw portfolio.

As well as the study side of 3D Design, we ensure exciting enrichment opportunities for our students. To name a few, we have visited cities such as Liverpool and Manchester to view galleries and architecture, as well as visiting Yorkshire Sculpture Park and

the Grand Designs exhibition in Birmingham. Students also have the opportunity to go on an international trip to gather primary evidence to support the A level year.

There are a number of specialist fields that our students explore, and these include Product Design (furniture, jewellery), Sculpture, Environmental design, Set and Interior Design, and Architecture. Whatever the specialism, students receive all the support they need in our industry standard workshops, with a Technician available at all times. Furthermore, students have access to 'Drop-In' workshops once fully trained on all machinery.

If you are interested in design, have imagination and want to give your ideas the chance to flourish in a great environment and with a wide range of materials at your disposal, then 3D Design is the subject for you!
