study of 3D  
design

# A Level 3D Design

The school of Visual Arts at Runshaw College is an exciting, dynamic and challenging environment in which to study, where students have access to high quality specialist resources, equipment, teaching and technical support. Providing our students with a designated design studio and 2 specialist workshops, we are confident that our working environment provides our students with the right setting and learning atmosphere to nurture their creativity, develop their design acumen and build on their practical skills.

Through the development of contextual understanding, students also use drawing to inspire their ideas and apply the design cycle to produce developed and resolved outcomes. Students are guided to explore a wide range of 3D materials, techniques and processes (some traditional, and some not so!) in the development of their work and are encouraged to use both hand and CAD processes.

The learning experience is such, that amazing pathways for progression emerge for our students. In previous years, we have seen students moving on to prestigious Universities within Design such as Cambridge, Lancaster and Nottingham Trent.

To support and develop our students' subject knowledge further, we like to offer exciting enrichment opportunities for our students. To name a few, we have visited cities such as Liverpool and Manchester to view galleries and architecture, as well as visiting the Great Northern contemporary craft fair and the Grand Designs exhibition in Birmingham.

There are a number of specialist fields that our students explore, and these include Architecture, Sculpture, Product Design, Furniture, Lighting Design, Ceramics, and Jewellery. Whatever the specialism, students receive all the support they need in our industry standard workshops and during their study periods have access to supported 'Drop-In' workshops once fully trained on all machinery.

If you are interested in design, have imagination and want to give your ideas the chance to flourish in a great environment, with great support and with a wide range of materials at your disposal, then 3D Design is the subject for you!

## Entry Requirements:

A minimum of 5x Grade 5s including Art & Design OR Graphic Products / Resistant Materials OR portfolio of work.

## What's great about this course?

End of Year Exhibition

Highly successful progression

Drop in workshops and individual technical support

Industry standard Workshop & Design Studio
